

(1) Already have the main application/login role selection
create a user and save as assigned admin or

(2) after login, need the admin interface
where user can create, edit, and delete

(2a) create a new assignment window

(2b) edit assignment window

(2b.1) delete assignment?? as a button?

view all assignments window (can be in both??)

view assignment details window (can be in both??)

(3) after login, need the user interface
where user can only view and update status

(3a) view button and then subsequent view window

(3b) update status of assignment as a button and subsequent window

database setup (at the beginning?? and whichever button user selects just need to call
the database and write to it in each separate function)
